

## William Lider

In the USEPA Draft, "Authorization to Discharge under the National Pollutant Discharge Elimination, Page 5 of 18, System" Table 1. Effluent Limitations and Monitoring Requirements, there is no flow volume stated for the gallons per day discharge under the 7-DADMax column.

What is flow amount of heated effluent being discharged into Jim Creek? Is it 100 gpd or 1,000,000 gpd? State the allowable flow amount in the permit.
