

Detra Segar

I am not qualified to have technical comments about the project. As a resident of Eastlake, where highway storm water run off is prevalent and where we have just undergone a significant upgrade to the storm water system, I see the importance of keeping the water in all bodies of water but especially Lake Union and the Montlake Cut clean. Between floating homes and a great amount of recreational use the lake is in use more each year. With adults and children literally in the water keeping it healthy is paramount.

We know that the water temperature of Lake Union is going up and the oxygen level is going down. Seattle is blessed with these wonderful areas that can be used by everyone. We need to continue to improve our stewardship.

Thank you
