I am concerned that a significant number of businesses are left out of the source control for existing development programs required for other MS4 permittees. Many businesses line WSDOT roads that have WSDOT MS4 infrastructure. These businesses are not included in other permittees' source control programs if they only have potential to discharge to WSDOT MS4. Therefore, it seems like WSDOT should be required to implement a source control program for existing development like the rest of the Phase 1&2 permittees. Or if they have no legal authority, they should be required to contract with other permittees to perform these inspections for them.
