Section S5.C.5.b.ii (Page 12): There appears to be a logical error in this section. WSDOT has a project that will achieve Design Approval prior to December 7, 2026 but the ad date is after 2028. The 2026 HRM will not be released until an undetermined date in 2027. How can the project comply with a manual that does not yet exist? This means the project must be delayed by one year, waiting and unable to design anything until the HRM is published. This statement in the draft permit will cost the taxpayers of WA hundreds of millions of dollars. Please consider removing the ad date stipulation. It should be based solely on Design Approval date.
