## Burnt Bridge Creek Corridor Cleanup Summary

Time Period: March 9, 2021 – February 12, 2026

Cleanup Events: 81

Material Removed: 581.70 Tons

Direct Cleanup Costs: \$396,178.01

Labor and Equipment Costs: \$235,438.36

Reconstructed Total Cost: \$631,616.37

## Why This Matters

The Burnt Bridge Creek ARP discusses litter, source control, restoration, and water-quality improvement.

City records indicate that the Burnt Bridge Creek corridor required repeated cleanup operations over multiple years involving hundreds of tons of material and substantial public expense.

The cleanup activity involved more than ordinary litter collection. City encampment-cleanup contracts describe removal and handling of garbage and solid waste, human waste and bodily fluids, syringes and needles, biohazard-contaminated materials, hazardous materials, contaminated soil, fire debris, abandoned property, tents, tarps, mattresses, furniture, and similar debris.

City contractor records also show the use of dedicated encampment-cleanup and biohazard-response contractors and recurring multi-person cleanup crews.

## ARP Question

Should a recurring source-control and restoration burden that resulted in 81 cleanup events, removal of 581.70 tons of material, and approximately \$631,616.37 in public expense be documented and evaluated within the Burnt Bridge Creek Advance Restoration Plan?

## Recommended ARP Closing Statement

The ARP should include a discussion of recurring encampment-related cleanup burdens, associated waste streams, restoration impacts, and source-control considerations within the Burnt Bridge Creek watershed, together with any monitoring or adaptive-management measures deemed appropriate. Future cleanup events, cleanup costs, waste tonnage removed, restoration expenditures, and significant restoration barriers within the Burnt Bridge Creek corridor should be documented and periodically provided to Ecology and the ARP Program Manager as part of ongoing implementation, monitoring, and adaptive management of the watershed.
