Heller, Marcia, Texison, here  
I live just south of the ridge  
south of Kalsbeorn River Valley,  
North of Lewis River Valley.  
We just faced Big Horn fire that  
grew very fast because of the conditions  
very windy in these mountains are  
strong and easterly southerly.

A leaky pipeline or wind mixing  
flames with methane could  
increase wild fire and even ignite  
potentially, as active fire could  
become more like California  
where fracking has caused methane  
gas leaks and fires.

Please, do not be like Chinese  
President Xi Jinping's "vest man". He  
doesn't care how many people have  
died of his COVID-19 and he doesn't  
care about our climate change,  
massive wildfires and people  
burning to death in their sleep.

PLEASE SAY NO! Takahana  
Methane  
Plan,  
Marcia Texison
