

Don Steinke

OK, my final comment.

I began commenting by thinking about impacts you left out that should be included in the SSEIS.

Now I turn to elements that were inserted by the proponent that should not be in the EIS and should be removed.

Remove the speculative, business as usual, market assumptions!

James Gus Speth from Yale, is a member of the National Academy of Sciences. He says that this planet will not be fit to live on, if we continue business as usual.

To include business as usual in your SSEIS is to accept our eventual destruction.

Remove the speculative, business as usual, market assumptions from the SSEIS.
