

Denise Schafte

There is no more time to continue energy production as usual when there are a myriad of options to replace any energy produced by this archaic system and the oil and gas industries being handed all rights over the American people and their futures.

It is insane to propose anything that would contribute to continued greenhouse gases and environmental destruction with exponentially devastating wildlife fires, hurricanes, desertification, temperature increases far higher than expected, poisoned water, cancer rates now at 1 out of 2 people, 500 extinctions a month, crops that are requiring more and more fertilizer every year due to soil degradation, mass refugee crisis world wide due to rising sea levels and evacuations of island states and coastal areas and due to food and water limitations.
