

Sally Keely

KMMEF will emit 62 tons of particulate matter annually. Particulate matter is known to carry Sars-Cov-2 virus (COVID-19) per <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7345938/>. Areas of high particulate matter also have high rates of coronavirus infection and death. Ecology should DENY any chemical or petrochemical plant that will increase atmospheric particulate matter so as not to increase pathogenic transmission on the PM particles. PLEASE deny Kalama methanol if for no other reason.
