

Deena Grossman

>> Thank you very much I am Dena speaking from Portland Oregon, less than 35 miles from Kalama, Washington. Thank you for taking public comments. We can't breathe. This week, the letter to President Trump saying is time to abandon the disastrous course that now envelops us in spoken aspect deliberating the size of action to slow climate change must be taken on a global scale with the U.S. in the league. NWIW, SEIS tries to whitewash the issue of greenhouse gas initiatives exceeding 40 million tons per year of the proposed Kalama methanol refinery. The numbers against the larger enormous imaginary numbers for a plant will elsewhere. Saying if you don't let us build us here our corporation or another one will build a worse polluter elsewhere. The insistent has to be built and they are wrong it does not. NWIW, a Chinese government fossil fuel Corporation would become the single largest greenhouse gas polluter in Washington. Please, people of the Department of ecology, lead us to a future of clean air we can breathe. Cool, clear water, driving forest and healthy communities for your sake and for all of our to learn and grandchildren. These take the path to reducing greenhouse gas pollution and take your own mission statement to heart. Protect, preserve and enhance the environment for current and future generations. Oppose actions which will intensify the environmental segregation of our beloved Pacific Northwest. And deny carbon for building the worlds largest methanol refinery in Kalama, thank you sincerely for your attention.
