

Susan Renhard

I oppose construction of the Kalama Manufacturing and Marine Export facility. Consensus of the world's scientists is that to prevent the world's climate from becoming worse we need to reduce greenhouse gas emissions to zero in less than ten years. We need to begin immediately for the sake of future generations. Building a new facility that will contribute huge amounts of greenhouse gasses to the atmosphere and will only further destabilize our climate and prove disastrous for our children and grandchildren.
