

Kathleen Patton

My name is Kathleen Patton and I am a 20-year resident of Cowlitz County and like many previous speakers I want to underline any imagine ecological unfit from this power plant is based on speculation and many, many assumptions while the facts are that it would become the largest producer of methanol in the world and we need right now the only way we know right now to curve the rage of climate change and the devastation that it brings with fire and flood. Is to keep these fuels in the ground. We do not need to be creating massive amounts of infrastructure for fossil fuel companies to continue to pour pollutants into our environment. We need to put a stop to all of it now. I hope you can hear me. Thank you.
