

## Sharon Kalister

Re: Kalama Manufacturing and Marine Export Facility Second Supplemental EIS.

Climate change is real and it's here now ... showing the impacts in the PNW with unprecedented 60 mph winds this month that spread wildfires across areas that have not historically been impacted. I've lived in this area since 1964 and have never seen anything like it. The Arctic is melting and we are seeing more numerous and stronger hurricanes in the SE US. The idea that we would even be considering allowing new fossil fuel infrastructure is the epitome of stupidity, ignorance, and denial. "No" is the correct and only response to this project.
