

Matt Gamel

>> And Q I'm an environmental scientist and we recently moved out from the keys, because the hurricanes was becoming unbearable. As close as everyone knows the West Coast is now on fire. Great place to move. Laura Watson if you have any question about whether this is a change that is good, wake up and smell the shitty air, in a global scientist will tell you we are just starting to feel the effects of climate change. The methanol refinery would release smoke into the air and that doesn't care about boundaries, those would be just about your family and mine. If we don't burn the soil, the process these chemicals that someone else will cut does not make it true or right. If we as a society ever want to move away from fossil fuels, we need to stop subsidizing these and industries with taxpayer money. I understand there's a lot of washer and money behind this project. We all know it is wrong. Even the business behind it knows it's wrong. They just care more about the money in the short term. I beg you as a fellow lover of the state and someone just wanting to raise their family and a beautiful, or just place. Please take a stand and denied this project. Thank you.
