We do not need this in this state or in our world anymore. Plastic should go away. Fracking should not be allowed. We have so many environmental problems. Why add to them? For a few jobs? It's not worth it. The impacts to our health is beyond measure. The impact to our planet is sickening. The greenhouse gas emissions are unacceptable. The use of fresh water and the limited resources like natural gas, unacceptable. I guarantee that if you allow this, there will be so many protests and lawsuits it won't be worth it for this company to exist. This won't be easy and lawmakers will be held accountable.
