

Leslie McClure

If we are smart, we will be building all new sustainable infrastructure in the next ten years. Going green will bring jobs and save us from climate change.

To start a new fossil fuels project now is ridiculous, wasteful, and damaging.

The claim that natural gas is a bridge fuel is old now plus we now know that methane is as dangerous as CO₂ for our environment.

Also, Covid has shown us what happens when we go where we don't belong and compromise other animals. As we search for more fossil fuel, we displace more animals and enter places that carry viruses unlike any that we've seen.
