

Diane Dick

>> Thank you I am Diane Dick and a resident and setting the project for years. This would be one of the largest in the world. And told me personally it was because many pollution control centers would be too costly with CR and cheaper to take the electric power from the public grade.

Information in the air discharge permit, this refinery has the capacity to admit over 1 million metric tons of GhD's every year just on the process site. And NWIW states they will mitigate all in-state emissions and first priority will be given to projects in Tellis County, please give us specific examples of the mitigation projects and their ability to sequester read house gases from the atmosphere. The only viable way to remove CO2 from the atmosphere is bike growing trees or crops. According to the EPA greenhouse gas calculator it would take 1,306,000 acres of forest land to remove 1 million tons of this in a year. It only comprises of about seven harm forty six,000 acres. There is no way I and the NWIW will be able to mitigate the infractions and this county or all of Southwest Washington. Demand accountability for a real plan now because you surely won't get voluntary compliance later. Let NWIW one more company that tries to buy its way out of--
