

Chris Chapin

I'm a resident of Washington, a concerned citizen. And I am here to oppose this project. I do want to thank you for your time. To take public comments. And that is really the issue we have here is an issue of time. We don't have time to be screwing around with fossil fuel projects anymore. Now is the time to invest in clean energy, now is the time to rebuild our environment, now is the time to get rid of artisan ship and come together and work towards a solution. Now I understand the communities where this project will be built, need jobs and need work. I'm very sympathetic to that. I believe every person has a right to a dignified life. And what I think we can do instead is we can look towards other projects. We can look towards renewable energy projects. You know the obvious ones. Solar, wind. There is no stuff being developed, waves offshore. Capturing energy from the water and there is other types of energy are not electricity. We have destroyed 30% of arable soil on this planet. We need to start rebuilding ecosystems. We need to restart holding the bio diversity. These are projects that Northwest innovation would be more than capable of doing an awesome job. They have the manpower, they have the machines. And they have the knowledge. So I urge them to look towards other solutions. Thank you.
