

Megan Richie

I oppose this facility and ask that their permits be denied. This is a risk our community cannot afford. The cost is too high. They would be using an obscene amount of natural gas to produce the plastics our world does not need at a cost our community cannot afford. Costs would go up locally for electricity and natural gas. In the event of a spill Our residential and wildlife habitat would be put at risk of being destroyed with little to no recovery. The costs are too high and I ask that this facility be denied.
