I am among many voters Not wanting Fracked Gas and Electricity to be used by Methanol Refinery. I won't waste my words or your time going through all the environmental hazards this would cause.. Do you really want your forever next generations to be forced to breathe the toxic fumes just so put money in the pockets of all the powers that benefit from this? We need to leave this world a better place for our children and make their children proud to know that we did everything we could to give them clean water, clean air, and a perfect eco system.

Fracked Gas does indeed qualify as extremely harmful to the environment, along with pipelines, releasing greenhouse gases, fossil fuel spills and leaks, burning methanol as fuel in China, and the endless stream of single-use plastics.

We, as a human species need to act now to save our planet. Subsidized fossil fuel extraction and usage is devastating this world. Now's the time to make the switch to green, renewable energy. Our state is supposed to be all about that! Cowlitz County's citizens could be put to work building light-rail or a high-speed magnetic-levitation train along the I-5 corridor from Portland to Seattle, for instance! Good jobs!

I hope that we can continue to count on our Governor, who claims concern for the Climate Crisis, along with Laura Watson and her Department of Ecology Team, to lead the way by rejecting another Fossil Fuel Disaster. Neither Indigenous Peoples of Canada nor citizens of Kalama wish to reside in "sacrifice zones."

Thank you for your time.
