

Russell Jacobson

Please reject this project. We need to be moving away from fossil fuels but this plant would lock us into fossil fuels instead. It would use an enormous amount of water from the Columbia and Kalama River aquifers just at a time when water usage and shortages is becoming critical. Toxic fumes from the plant will adversely affect the health of thousands of residents. These are only a few of the many negative impacts this project would have on Washingtonians. I urge that you not let this let this project go forward. Sincerely, Russell Jacobson
