WA State Department
of Ecology (SWRO)

Dept. of Ecology
State of Washington

Howdy -

I, like many other people in southwest Washington, do not wish to see the Kalama Manufacturing and Marine Export facility put into operation.

Is Washington state really interested in curbing climate change or not? Lowering greenhouse gas emissions is a worthy cause and the methanol plant is not the way to do it. Whether the methanol is used for fuel or plastics - does it really matter? Either one is detrimental to our area, as well as Mother Earth.

Will the owners of the facility be held strictly liable for troubles that will undoubtedly

occur over the years? The Columbia river
has been a dumping ground for too long and one
or more ship, or trans-loading, mishaps will
only exasperate the problem.

I hope the department of ecology will
look at, and trust, the facts and not just the
temporary economic benefits - if any.

Thank you.

Sincerely,
D. Sieler
