

State Representative, 19th District

>> Hello I'm Jim Walsh, a steep representative in Olympia for the nineteenth district, including parts of Cowlitz county but not Kalama. Kalama is our neighbor. And I am encouraged by the department of ecology's draft second supplemental EIS. I encourage people who are speaking on this matter to look at the draft. We have to be consistent and rational. And how we evaluate environmental impacts of industrial projects or really any projects we consider state. In order to see that consistent perspective that we need to look appropriately at this project at the global carbon impacts. What this project will do is improve the global carbon footprint of the industries around the world. It is a net green projects. And that is a good thing not only for the economy of Cowlitz County a good thing for everyone on the globe. And I must say, I'm a little this appointed and some of the overall rhetoric and attacks and comments here. Please stay rational, stay based in science and facts. And read the second supplemental. This is a good project for Cowlitz County, for the globe and for Washington. Thank you.
