

## Allan Wise

Many times big picture comments are ignored in favor of detailed analysis. The proposed methanol facility takes away from quality of life in our community. This is important.

There is no way and I mean NO WAY that the facility as designed and used will reduce carbon gases on our planet. If we are to believe the Chinese government, and make no mistake this project is the Chinese government, will act in Kalama's best interest is a fantasy. The resources of air and water should not be for the taking by foreign interests.

The quality of my air will be lessened by this project. I live about 3 or 4 miles downriver of the site on a hill. I expect pollution at my home. There is a finite amount of water resource in our area. The project will use a tremendous amount of this water. This is not acceptable.

I want my state, its ecology dept, , and my community to be on the right side of planet preservation. I strongly appose this project.
