OFFICE OF DIRECTOR

September 12, 2020

Washington State Department of Ecology'
Olympia, WA

Please, once and for all, stop the proposed methanol refinery in Kalama. That refinery's voracious daily appetite for 130m cu ft of *daily* mostly fracked gas is enough to destroy the climate on its own. That amount of fracked gas amounts to more than all commercial gas users in the State combined. Gas is a fossil fuel and fracking makes things even worse.

97% of the world's climate scientists are in full agreement that we must get off of fossil fuels and move instead to clean, renewable energy if we are to have a livable, sustainable planet for our future generations.

Thank you,
Mona Lee
