

Marcia Pearson

You must not allow this enterprise to be initiated. The disastrous effects are clear: dangerous pollution, draining of precious aquifers, the largest facility for fracking, the destructive consequences on health and safety for land, water, environment, and all human life, but also the precedent you would be setting, opening up possibilities of similar facilities as this. There is no choice you should be making but to protect the resources that are in danger. I am appalled that you are seriously considering it. It's clear to everyone that approval of this proven hazard could only be done for the short-term benefit of making money, with the empty rhetoric of providing jobs. We are not fooled by this. Hard as it may be for you, your duty, our duty as citizens who must live and breathe and care for what you are ready to throw away, our precious environment, our future as a world, it is your duty to not make the mistakes that will cost us all in the future. Do the right thing, deny this facility from being built. Please. If you stand up tall now, when will you?
