

Nancy McMahon

The science is in and we have very little time left to transfer our world from fossil fuel dependence to renewable sources of energy. We have begun to make headway in this direction, but this facility would be a giant step backwards.

The project would increase greenhouse gas emissions within Washington state by almost one million metric tons of carbon dioxide equivalent a year. The Kalama facility would be one of the 10 largest sources of greenhouse gas emissions in the state. Northwest Innovation Works has said that it will mitigate all of the facility's in-state emissions.
