

Kirk Leonard

The Kalama methanol refinery would be one of the top polluters in Washington State. The SSEIS analysis estimates the Kalama Manufacturing and Marine Export facility would produce 4.6 million tons of carbon pollution each year. This level of pollution is inconsistent with achieving Washington State's climate goals.

We the people in this state depend on these resources, not to be used for producing plastics or fuel for China.

I oppose this project, please deny the permit.
