

## Jan Hydra Fracka Zuckerman

>> All right I am ready. Hello, I'm name Hydra after the mythological creature when one of my heads get knocked off aggro tomorrow heads and growing new heads just like the expansion of the hydraulic fracking operation [ laughing ] why settle for dash mac energy when they can rely on fracking to get extreme energy. Everyone knows getting gas is hard work and it isn't easy like it used to be. Really expensive, bad for the claimant, messes up the land and the skies but for a limited time only if you executives can rake in the moccasin to 40 years more on the methane gas. So what is the problem? Why shouldn't they bring forth the treasures of the earth? For example drilling, pumping and fracking chemicals releasing into the air and groundwater, permanently poisoning millions of gallons of clean water. I mean what is the big deal?

In the first 20 years in the atmosphere methane is the 86 times more effective, trapping heat than carbon dioxide. Northwest innovation won't leave any money in the ground will they? Just think this is their opportunity to generate up to 5 million tons of additional greenhouse gas pollution every year. According to them our planet can afford to burn up, I mean more gas. That is why I am here to thank you for trusting fossil fuel industry to do the right thing, ignore the science. And forgetting the green light to Northwest innovation works. Thank you.
