

Bill Sampson

>> Hello my name is Bill Samson and I'm calling in from Seattle and thank you for the opportunity to testify today. I have a lot of concerns about this project and I want to say first but I would like to everyone to have access to a good job and clean air and clean water and to be healthy and safe so I think fossil fuel industry, whether coal, oil, gas, it's not the way to do that but renewable energy is growing and it is the future and the projects like this, they increase instance of murdered and indigenous women, a lot of pollution and this project in particular and energy consumption is a monster and take a lot of water out of the Columbia River, this is already extremely polluted and-- extension. These are worthy indigenous people want to stay and a very important part of the-- economy for nonindigenous people as well. I have a lot of concerns about assumptions like it seemed like a gas industry report copied and and saying-- definitely for 40 years without any changes throughout the regulations and that this project is clean and the other guests will not be clean. And that all fossil fuels dash mac my time is almost up. Thank you.
