

Bill Adams

This fossil fuel project should not go forward mainly for its dependence on mostly fracked natural gas. There's nothing remotely good about fracking. It's only purpose is to bring more fossil fuels into the world when the world's scientific community says we need less. Less so that we can transition to clean, renewable energy which does not pollute. This transition is not going to happen overnight but it has to happen if we are to have a planet that is safe and habitable. 97% of the world's scientific community are behind me in making this statement. This project with its voracious appetite for mostly fracked gas, a fossil fuel, will only slow the transition. Clean, renewable energy is inevitable. Why delay it with a project of this magnitude which would also be a major polluter? Please deny it. Thank you,

Bill Adams
