

Esther Kronenberg

I write in strong opposition to the Kalama Methanol Refinery. The SEIS has failed to consider vital information about the impacts of fracking, pipeline transportation and the air and water pollution associated with these activities.

Further, the reasoning that there would be even worse pollution from other similar plants if this one is not built is ludicrous. The SEIS must consider the REAL impacts of this facility, and cannot speculate as to what may happen.

What WILL happen is that this plant will generate enormous amounts of climate pollution, lock us into fossil fuel production for decades, and emit dangerous levels of air pollutants.

How the "green" Governor can allow this to go forward is confounding. Our State deserves better, our country deserves better, as does the planet. Do not proceed with this destructive project.

Thank you.
