

## Pix Basso

Please do not allow a foreign company to invade our pristine Kalama and create an unhealthy environment for man, land, wildlife and air.

Ask yourself would you want your children or grandchildren live in an area where a catastrophic event could and most likely will occur at any given time. This is an earthquake zone. We have a major river system, a major interstate highway system that will all come to a stand still for months if this plant explodes. And for what risk? Money in the Chinese pockets because we have already given them tax breaker so the tax payers won't see anything. Stop the madness.
