

Jane Nicolai

Dear Department of Ecology,

The current EIS compares the proposed Kalama methanol facility with one that doesn't exist, comparing make-believe numbers against the stated 4.6 million tons of climate pollution every year for forty years this facility would produce. Compare it to NOT building the site and you will find the real numbers represented here.

Add the destruction of building the pipeline, the damage of eminent domain, the eye-watering, cancer causing pollutants up and down the Columbia River, and INCREASED POLLUTION AT EVERY STEP OF THE PROCESS it is your duty (and mission statement) to deny this permit.
