

Merna Baker Blagg

Our world, country and state does not need an increase in hazardous pollutants. Healthy and clean air is what we all strive for and KMMEF would extremely increase the air quality to a devastating and toxic level. We are at a critical point in the climate crisis. Please stop denying the crisis and work on sustainable clean and healthy alternatives for embracing growth and economic prosperity. Please, as a concerned Gramma, born in Kelso, living in Vancouver, with 2 sons and their families living in Longview, I implore you to deny the permit for this project to move forward.
