

Sept Gernez

Hello I'm an organizer your with the CR club. I represent 3.8 million supporters across the country counting on you to deny this project.

The club z mission is to explore, enjoy and protect the planet. This project would destroy the local environment, while massively intervening to global warming and working to stop it. I would like to remind you as others have, of your mission statements. The Department of ecology's mission is to protect, preserve and enhance Washington's land, air and water for current and future generations. Approval of this project would be counter to your mission. Especially frustrated with your displacement here he and the SSEIS, I have a Masters degree in economics and I can tell you any economic analysis is only as good as its assumptions. The scenarios don't assume any human agency to avoid our own demise back and therefore fails to assume self interested rational actors as we like to do an economic theory. Look outside. Our region is burning. There were boats, for love fossil fuels off the coast of California that have nowhere to go. Our world is on the brink of radical social change and you can't predict fossil fuels future without predicting human extinction. We don't need cleaner fossil fuels, we need to stop using fossil fuels period. I for one and working toward a future where my 4-year-old nephew will have an environment to enjoy. And where his kids can go out in the summer without a respirator. Please join me. Fight for a future where our children and their children can survive. It's simple please deny the project.
