

This is the wrong direction to be taking.

I am a citizen of Washington State and planet earth. We are at the brink of a climate crisis that is going to be with us for many years to come. As a mother I care deeply about the environment we are leaving our children, their children and the generations following. We continue at this time to proceed with our lust for money and power with no regard to our future.

The science is behind all I say here. Our earth is showing us the myriad problems faced by continued, purposeful ignorance. Hotter climate, rising seas, worsening fires, hurricanes and storms. Higher sea levels pushing more people into refugee status.

Here we are discussing more of the same...fossil fuels are the culprit. With a greater national will and placing our money and brain-power into solving the crisis and improving clean energy alternatives we can change this worsening scenario around.

Stop this methanol plant now. Let's walk into a better future together.

Thank you,

Debbie Stempf
