

## Bill Adams

Please do not let this project happen. It would be an environmental train wreck in the making. According to Sightline Institute, a PNW environmental think-tank, its air pollution would be equivalent to 4.6 million tons of carbon dioxide each year or about 5% of our state's total climate emissions from all other activities combined. We don't need 5% more emissions. We need 5% less if we are to have any climate benefits. This project is not going to make that happen. It would only worsen our climate situation. Please do the right thing and reject it. Thank you, Bill Adams
