We are down stream from this disaster in the making. Please reconsider, in an age when we are phasing our our dependence on non-renewable fuels this proposal is a financial disaster as well as a ecological and humanitarian disaster. I am sure the state will provide taxpayers dollars to encourage the site to be built...so you make citizens pay for their own poisoning. Interesting your disregard for that fact. As we continue to downgrade the importance of these products the plant will within 10 years be losing money...so there is no economic benefits just a black hole for taxpayers to pour money into
