Northwest Innovation Works' cannot be trusted. They have deliberately misled the public and the state of Washington about the environmental, health and safety impacts of this project. They expect us to trust them after they lied about plans to burn the methanol as fuel?

The new SEIS analysis released what NWIW has denied, the refinery would use more methanol to be burned as fuel in China which would cause significantly more greenhouse gas emissions.

The proposed largest fracked gas to methanol refinery in the world would become one of Washington state's most significant sources of climate changing pollution and use more fracked gas than all of Washington's gas-fired power plants combined.

The draft study shows the refinery would cause a staggering 4.6 million tons of climate pollution every year for 40 years. The climate consequences are enormous.

I live in Kalama and oppose this dirty project.
