

Thomas Gordon

2060 is when Xi wants China to be carbon neutral 40 years from now which is the supposed life-time of the Kalama methanol plant.

Meanwhile, NWIW is trying to get the U.S. to loan \$2 billion dollars to build this refinery.

So in 2060, does China shut the plant down and say goodbye? Leaving us the clean-up, useless equipment, depleted resources, a lot of polluted land, and haze in the air? And debt.

Please do not issue permits for this monstrosity for all except NWIW and China.

Thank you.
