

Tylor Hankins

First, I live in Kalama, so I'll be the first to admit that I don't want to be staring at this thing in my backyard, or be smoked out by chemicals during a weather inversion.

But I think some of us are missing the bigger picture. All these numbers, charts, and graphs don't mean a thing if China continues to expand their use of petrochemical products that generate greenhouse gasses. Will methanol produced in Kalama displace Chinese use of coal reserves and petroleum products, now and forever in the future? Yeah...??? Right...

Of course Communist China has your best interests in mind. Never forget Tiananmen.

The joke's on us...
