

## Debra Lee Keim

I do not support extending a permit for the Kalama Manufacturing and Marine Export Facility. With all the extreme climate events we are experiencing now and predicted for our future, I find it devastatingly short sighted to proceed with this facility which will become one of the worse greenhouse gas emitters and consumer of fracked natural gas in our state. Department of Ecology do not issue this permit! This area of the Columbia Has plenty of sunshine and wind. We need to encourage renewable energy projects which will provide economic benefits and green jobs, not methanol producing greenhouse gas emitters.
