

## Sheri Jacobson

I urge you to reject this project. Annual emissions from the manufacturing process alone would add over a million tons of carbon pollution to our air. It would also emit hazardous chemicals like ammonia and nitrogen oxide. It will use government funds for a project that will hurt our environment instead of being used for something to help it. My home state of Oklahoma is wracked by earthquakes as a result of fracking. I don't want my adopted state of Washington to become another fossil fuel victim. Please stand up for the citizens of Washington and reject this project.  
Sincerely, Sheri Jacobson
