

Bonnie McKinlay

Thank you for accepting public comments on this crucial issue.

It boggles my brain to think that there is a possibility that Washington state which has benefited economically from science, can consider approving the Kalama Manufacturing & Marine Export Facility. The methanol facility proposal runs counter to the prevailing scientific wisdom on ending fossil fuel expansion. Please examine the extreme environmental harms caused by the hydraulic fracturing process. I urge you to study the report, "Too Dirt, Too Dangerous" from Physicians for Social Responsibility (2017).
