

Mary Lou Dickerson

Hello this is retired state represented Mary Lou Dickerson, I lived in Seattle in the past two weeks my fellow residents have been choking on smoke caused by the fires pick these are directly related to climate change as has been noted by the governors of Washington and Oregon on. I care about the siding of this plant because I love the Northwest. I don't want it to be unnecessarily harmed by the huge influx of greenhouse gases that will result from the refinery. The analysis demonstrates refinery will cause 4.6 million tons of carbon pollution each year for 40 years. This all feeds into climate change. And in the face of Washington's displayed of mandated climate goals and I should know I helped write them. And the displacement argument in over a 40-year period in history tells us how markets fluctuate from that. And especially over a period of 40 years. There is no good way to accurately predict what they will be. Climate change and most likely-- instead of this plant we must more vigorously focus on green energy. Wind, solar, etc. Right now. We can do this if we use the same level of the energy and focus on creating green energy. That we are currently using and finding a vaccine for COVID-19. It is every bit as important. I urge you to deny the refinery and shoreline permit. It's the right thing to do. Thank you very much.
