

Sally Keely

>> Hello, my name is Sally Keeley I'm an educator mother and longtime resident of Kalama, my husband and I own five acres home outside of the city. Have been working actively to stop the refinery for 4.5 years. As a mathematician I would normally provide you with a numerical analysis as I carefully read every page of the SEIS Bible reserve written comments yesterday want to speak for my heart. This is a climate disaster, we cannot afford the 4.6 million metric tons of carbon and report it will create every year for 40 years, we don't have time. We are in a climate emergency. That climate catastrophe is causing loss of life, land and livelihoods right now. You only need to look out the window to see in the global-- these are becoming more common and worsening each year our homes are on fire, the forest are on fire, the planet is on fire. My 18-year-old daughter has come of age during this crisis. If we don't reduce the emissions now she will have a future filled with extreme weather conditions, droughts, wildfires and other poor air all the. All parents want better life for their children. What happens when she wants to have a child? She would be a fantastic nurturing mother. Will she be forced into a vision of going childless not bring a child into a world overwhelmed by climate, pollution driven. How dare we put our children in that predicament. You have the ability to protect the people of Washington State young and old. That is your mission. You have the power to say no, I urge you to reject the shorelines permits for NWIW plant Thank you.
