

Don Steinke

To recap:

The DSSEIS for Kalama methanol:

Relies on a trust that other countries will not establish policies that alter the market for energy and plastic.

Fails to recognize that countries around the world are banning various types of plastic.

<https://www.theladders.com/career-advice/14-unexpected-countries-that-have-banned-single-use-plastics#:~:text=Rwanda,ban came into full effect>.

Fails to recognize that California now requires 50% recycled content in soda bottles.

Does not verify assumptions of methane leaks from pipelines

Does not account for abandoned wells that will leak methane forever.

Does not acknowledge that pipeline companies don't bother to repair pipeline leaks promptly unless there is a threat to public safety.

Does not acknowledge that China is committed to begin reducing emissions in 2030, and be carbon neutral by 2060.

Does not consider Inslee's Clean Air Rule

Does not consider HB2311, which establishes a state goal of 45% below 1990 levels by 2030.

Does not account for the emissions associated with ships while docked.
