

L Bechtel

I am totally opposed to the Northwest Innovations proposed Methanol plant.

Fracking of gas for this project destroys the environment, contributes to earthquakes, and pollution on its own. Greenhouse gas emissions needs to be reduced. With this plant we are adding to.

Now China wants to built a plant that can destroy our city with one explosion. Add to that the fact that they have been deceptive all the way through. First it was to mitagate their pollution. Then the assurance was to develop plastic and not use for automotive fuel, and now that has changed too. Either way our dependence on plastics and fossil fuel needs to be reduced not added to!

Let's talk about the Salmon runs that our area is so dependent on, the impact will be great. Noise and light pollution alone will have a major impact on their ability to hide from predators. What about a spill, it's only a matter of time.

The impact on wildlife, on humans and on our air is not worth the dollars and few jobs it may bring. Do not destroy our way of life, our waters, and our Northwest for the profit of China!
