

## Nicole Acevedo

A Methanol Plant in Kalama would be a disastrous. Methanol can be lethal to the health of people in community and you do not know how much can escape and harm the community and the water around it. I am opposed and if taken further there will be protests. this is not what we need nor want in our community. Our air has already been disrupted my smoke in the air, now long term affects of methanol can cause long term health problems to otherwise healthy people. I strongly opposed Kalama Manufacturing and Marine Export Facility
